PRODUCT SUMMARY

The AM7515MT8A is a 5MP Dino-Lite Edge Series microscope that has a magnification range of 700x- 900x with built-in axial lighting. Through the use of Flexible LED Control (FLC) on Windows computers using the included DinoCapture software, this model is capable of switching between or mixing, brightfield and darkfield illumination revealing details that are very difficult to see under normal light. The AM7515MT8A includes the Automatic Magnification Reading (AMR) feature which helps aid with measurement by displaying the current magnification directly in the live view window.

This product requires a Windows computer (we recommend Windows 7, 8, or 10)
